# RATE CALCULATION MODULE

## Select the best carrier and service level for your shipments

### CALCULATING THE CORRECT TRANSPORT PRICE IS VITAL TO COMPARING CARRIERS AND SERVICE LEVELS

Reading carrier rate cards, it can be quite daunting. When you also need to calculate the correct volume or load meter weight, find the correct zone in hundreds of countries and postal codes and need to calculate dozens of surcharges, it can feel like an overwhelming task. Not to mention the differences in calculation methods, sometimes based on price per piece, price per kg, price per pallet, percentage, etc. How are you able to select the best carrier and service level for your shipments without a proper price comparison? Discover ShipitSmarter's Rate Calculation module.

## Benefits

ShipitSmarter's powerful rate engine will help you to select the best carrier and service level by

★ Calculating the total shipment price, including all possible surcharges (fuel, remote area, dangerous goods, oversize, etc.).

★ Comparing multimodal carriers including Express, Road, Air and Sea freight.

★ Automatically calculating shipments based on actual weight, volume weight or load meter weight.

★ Automatically converting all carrier rate cards into one and the same currency for easy comparison.

★ Taking preferred lead times or a specific delivery date into account, making sure the system will not select a "slow" service over a "fast" service based on price alone.

★ Skipping carriers and service levels that do not match the shipments specifications on length, weight, dimensions or preferred options.

## The best shipping option guaranteed

This powerful rate engine handles all your negotiated carrier rates. Be it Express, Road, Air or Sea freight, this module calculates the total transport price, including all surcharges, and converts these to the preferred currency. This enables you to easily compare prices and select the best carrier and service level for each shipment.

ShipitSmarter can automatically pick the most economic carrier and service level, by taking your preferences into account on lead time or a specific delivery date, ensuring that your shipment is always delivered in time.

> **This enables us to properly calculate quotations and purchase correctly."** As a result better transport decisions are made at the local branch offices leading to significant cost reductions. **"These insights result into different choices than before. "**
